

Wokitup! - Gungahlin Asian noodle bar

WATER ASSESSMENT

SAVING
\$9000
per year

***"We were really blown away...
The assessment report was fantastic
as it clearly outlined the potential
savings for various upgrades and
even calculated the time it would
take to payback the initial
investment."***

Chris Comb, Owner

Wokitup! is a casual Asian noodle bar that specialises in preparing and cooking 'made to order' noodle dishes using the Asian wok.

Traditional style woks use thousands of litres of water each day for washing and to prevent the woks from overheating and warping. The owner-operator explored ways to reduce the business' water use.

An Actsmart assessor visited Wokitup! and carried out a thorough energy and water assessment. A tailored report and action plan was presented to Wokitup! within a week.

The assessment report confirmed that a high volume of water, more than 5,000 litres, was being used daily in the cooking process and recommended installing waterless woks. The report also identified some lighting upgrade opportunities, and recommended the installation of timers on the hot water system and drinks fridge.

The owner-operator researched various waterless wok options that would be suitable for his business and arranged their installation. The business owner received the Actsmart \$5,000 rebate to help with the capital cost of this upgrade. Actsmart installed a water logger to provide accurate data on the water reduction through the new equipment, which will help monitor future use.

CASE STUDY

RESULTS

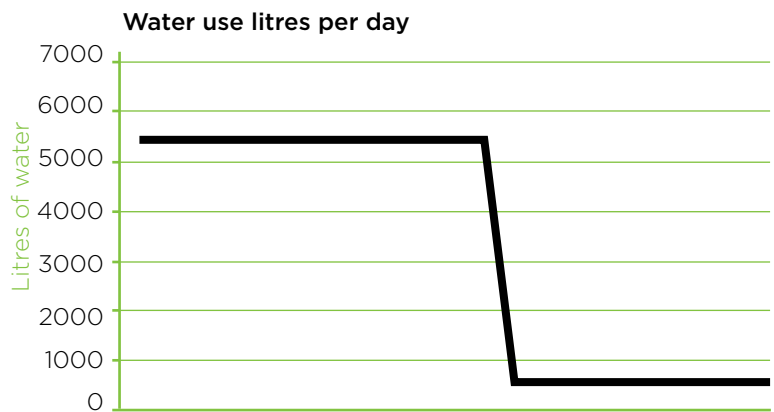

SAVING
4800
litres of water per day

WATER CONSUMPTION

FOR MORE INFORMATION

Once the waterless woks were installed, daily water use plummeted by 4,800 litres of water a day over the monitoring period, equating to a potential saving of 1,690,000 litres annually. At present commercial water rates, this amounts to a saving of \$9,000 per year.

After using waterless woks

“The Actsmart team were great and the results I achieved are phenomenal. Not only have we slashed our water consumption by over 80%, but the new woks are more efficient on gas as well.”

Chris Comb, Owner
